

Exercise plan :
Neck and shoulder mobility

Patient:
Andy Rubio

Date:
18th May 2026

Neck Rotation Overstretch: rotation can be done without the overpressure

Rotate your neck to its end of range. Place the palm of your hand on the side of your head, and gently push your neck into slightly more rotation. Hold the stretch, and relax. This is an excellent exercise to improve rotation and mobility in your neck.

Build into a daily routine of 5-10 neck rotations/then side flexion/shoulder shrugs/retractions etc

Neck Isometric Pillow Retraction (OR in sitting/standing etc)

Lie flat on your back, with your head on a pillow. Keeping your neck straight, press your head into the pillow to create some resistance. Your chin should not tilt up toward the ceiling during the movement. This is an isometric neck extension exercise.

Build into a daily routine of 5-10 neck rotations/then side flexion/shoulder shrugs/retractions etc

Neck Retraction (OR in sitting/standing etc)

Gently pull your head back as far as comfortable and down slightly. You will feel some tension at the front and back of your neck. This exercise will help your neck and upper back posture.

Repeat slowly really pushing back into the retracted position by focusing on a spot directly opposite your nose

Build into a daily routine of 5-10 neck rotations/then side flexion/shoulder shrugs/retractions etc

Bilateral Pec Stretch

Place your arms at 90-degrees, with your palms flat on the wall, and face towards a corner. Push your body into the corner keeping your hands in the same position. You will feel a stretch across your upper arms, front shoulders and chest.

Build into a daily routine once a day holding for 30-40seconds as able

Standing Rhomboid Strengthening

Stand up tall, with good posture. Place your arms at 90-degrees to your side, and palms facing downwards. Squeeze your shoulder blades together as you draw your arms back. You should feel a tightening of the muscles at the bottom of your shoulder blades. This exercise will strengthen your lower trapezius and rhomboid muscles, and help with posture.

Build into a daily routine once a day holding for 20-30 seconds as able

Standing Scapular Strengthening

Stand up tall, with good posture. Place your arms just out from your side, and palms facing forwards. Squeeze your shoulder blades together as you draw your arms back. Let your chest and rib cage expand. You should feel a tightening of the muscles at the bottom of your shoulder blades. This exercise will strengthen your lower trapezius muscle and rhomboid muscles, and help with posture.

Build into a daily routine once a day holding for 20-30 seconds as able
